INFORMATION AND SOFTWARE TECHNOLOGY

Author index – Volume 46

Abbas, A. 359
Adamu, A. 491
Ågerfalk, P. J. 619
Aggarwal, K. K. 689
Ali, F. M. 499
Andrade, J. 635
Aredo, D. 281
Ares, J. 635
Atif, Y. 149

Bae, D.-H. 81
Bećarević, D. 195
Benander, A. 99
Benander, B. 99
Black, P. E. 525
Blyth, A. 651
Bonfigli, M. E. 173
Börger, E. 287

Cabri, G. 173
Cai, K.-Y. 989
Cavarra, A. 287, 309
Chakhar, S. 547
Chang, T.-G. 739
Chen, T. Y. 329, 887, 1001
Chhabra, J. K. 689
Chiang, C.-C. 279, 857
Cho, H.-J. 229
Chou, S.-C. 383, 729
Chu, W. C. 403
Chung, C.-W. 229, 739
Cox, G. W. 677
Crichton, C. 309

Davies, J. 309
de Melo, A. C. V. 301
Dittrich, Y. 603
Dolado, J. J. 35
Dong, J. 293
Dorsch, J. 127
Du, W. 499
Dunsmore, A. 185
Dybjer, P. 1011

Ehrich, H.-D. 987
El-Far, I. K. 279
El-Morr, C. 219
Erdogan, N. 445
Etzkorn, L. H. 677

Fakas, G. J. 423
Fang, G.-M. 403
Farrington, P. A. 677
Fenicle, B. 343
Fortino, G. 907
Fortune, J. L. 677
France, R. 575

Gallagher, S. 473
Garća, R. 635
Georg, G. 575
George, B. 337
Georgescu, D. 1
Gervasi, V. 75, 761, 763
Gholston, S. E. 677
Green, G. C. 165
Greer, D. 243
Grieskamp, W. 1027
Gruner, S. 279
Gu, N. 839

Haiyan, Q. 1011
Harrison, R. 955
Hatton, L. 465
Hong, Z.-W. 403
Huang, Y. 457

Iheagwara, C. 651
Inoue, K. 875

INFORMATION AND SOFTWARE TECHNOLOGY
www.elsevier.com/locate/infsof

Keyword Index – Volume 46

Access control policies
An aspect-based approach to modeling access control concerns 575
Action research
Implementing requirements engineering processes throughout organizations: success factors and challenges 937
Adaptation
Method configuration: adapting to situational characteristics while creating reusable assets 619
Adaptive control
Optimal and adaptive testing for software reliability assessment 989
Adaptive development and maintenance
Adaptive development and maintenance of user-centric software systems 973
Adaptive random testing
Mirror adaptive random testing 1001
Adaptive testing
Optimal and adaptive testing for software reliability assessment 989
Agent
Virtual visits to cultural heritage supported by web-agents 173
Agile methodologies
A structured experiment of test-driven development 337
Anonymous
The design of an anonymous file sharing system based on group anonymity 273
API
Network application programming interfaces (APIs) performance on commodity operating systems 397
Architecture candidates
An industrial study on building consensus around software architectures and quality attributes 805
Architecture tradeoff analysis method
An industrial study on building consensus around software architectures and quality attributes 805
Aspect-oriented programming
An aspect-oriented framework for developing component-based software with the collaboration-based architectural style 81
Aspects
An aspect-based approach to modeling access control concerns 575
Automated testing
Instrumenting scenarios in a model-driven development environment 1027

Binary decision diagrams
Verifying Haskell programs by combining testing, model checking and interactive theorem proving 1011
Black box testing
On the testing methods used by beginning software testers 329
Black-box testing
Mirror adaptive random testing 1001
Bottom-up estimation
Top-down and bottom-up expert estimation of software development effort 3
BPEL4WS
A peer to peer (P2P) architecture for dynamic workflow management 423
Business process management
A document-driven agent-based approach for business processes management 373
A peer to peer (P2P) architecture for dynamic workflow management 423
Business rules
Expressing and organising business rules 701

Case study
Implementing requirements engineering processes throughout organizations: success factors and challenges 937
Category-partition method
On the identification of categories and choices for specification-based test case generation 887
Character-separated files
The space efficiency of XML 753
Choice relation framework
On the identification of categories and choices for specification-based test case generation 887
Classification-tree method
On the testing methods used by beginning software testers 329
On the identification of categories and choices for specification-based test case generation 887
Closures
Efficient mediators with closures for handling dynamic interfaces in an imperative language 351
COCOMO
Evaluating the learning effectiveness of using simulations in software project management education: results from a twice replicated experiment 127
Cognitive complexity
The impact of cognitive complexity on project leadership performance 165
Cohesion
A comparison of cohesion metrics for object-oriented systems 677
Collaboration
A role-driven component-oriented methodology for developing collaborative commerce systems 819
Collaboration management
Object-oriented conceptual modeling for commitment-based collaboration management in virtual enterprises 209

PII: S0950-5849(04)00157-0

Collaboration-based design
An aspect-oriented framework for developing component-based software with the collaboration-based architectural style 81
Collaborative commerce
A role-driven component-oriented methodology for developing collaborative commerce systems 819
Commitment-based model
Object-oriented conceptual modeling for commitment-based collaboration management in virtual enterprises 209
Common Object Request Broker Architecture
A secure methodology for interchangeable services 343
Communication
Communication and co-ordination practices in software engineering projects 473
Compact trie hashing
Scalable distributed compact trie hashing (CTH*) 923
Completeness
Erratum to "On the interplay between consistency, completeness, and correctness in requirements evolution" 763
Component
A role-driven component-oriented methodology for developing collaborative commerce systems 819
Component documentation
Component documentation—a key issue in software product lines 535
Component-based development
An aspect-oriented framework for developing component-based software with the collaboration-based architectural style 81
Component-based software engineering
A formal framework for analyzing reusability complexity in component-based systems 791
Comprehension
Experimental comparison of the comprehensibility of a Z specification and its implementation in Java 955
Conceptual model
A methodological framework for generic conceptualisation: problem-sensitivity in software engineering 635
Conceptual modeling
Object-oriented conceptual modeling for commitment-based collaboration management in virtual enterprises 209
Conceptualisation
A methodological framework for generic conceptualisation: problem-sensitivity in software engineering 635
Concurrency control
A distributed execution environment for shared java objects 445
Consistency
Erratum to "On the interplay between consistency, completeness, and correctness in requirements evolution" 763
Consistency management
A distributed execution environment for shared java objects 445
Constraint Satisfaction
Software engineering aspects of constraint-based timetabling—a case study 359
Control-flows composition
On the composition of Java frameworks control-flows 301
Controlled Markov chain
Optimal and adaptive testing for software reliability assessment 989
Controller synthesis
A controller synthesis algorithm for building self-adaptive software 719
Cooperation
Structuring professional cooperation 415
Co-ordination
Communication and co-ordination practices in software engineering projects 473
CORBA
A distributed and interoperable object-oriented support for safe e-commerce transactions 149
Reengineering windows software applications into reusable CORBA objects 403
Migrating legacy codes to distributed computing environments: a CORBA approach 457
Cultural heritage
Virtual visits to cultural heritage supported by web-agents 173
Customer relationship management
An object-oriented analysis method for customer relationship management information systems 433
Data clustering
FINDIT: a fast and intelligent subspace clustering algorithm using dimension voting 255
Data exchange
The space efficiency of XML 753
Data fusion
Data fusion application from evidential databases as a support for decision making 547
Data mining
The productivity impact of information technology in the healthcare industry: an empirical study using a regression spline-based approach 65
FINDIT: a fast and intelligent subspace clustering algorithm using dimension voting 255
Data modeling
On handling time-varying data in the relational data model 119
Database reverse engineering
Automated elicitation of functional dependencies from source codes of database transactions 109
Decentralized process enactment model
DPEM: a decentralized software process enactment model 383
Decision-making process
Data fusion application from evidential databases as a support for decision making 547
Defects
Self-assessment of performance in software inspection processes 185
Defect detection
Defect detection oriented lifecycle modeling in complex product development 665
Defect prevention
Defect detection oriented lifecycle modeling in complex product development 665
Design of experiments
Prediction of software failures through logistic regression 781
Design patterns
Adding pattern related information in structural and behavioral diagrams 293
A statecharts-based software development process for mobile agents 907
Design recovery
Automated elicitation of functional dependencies from source codes of database transactions 109

Distributed computing
A distributed and interoperable object-oriented support for safe e-commerce transactions 149
Distributed development
Defect detection oriented lifecycle modeling in complex product development 665
Distributed object system
A distributed execution environment for shared java objects 445
Document databases
The design, implementation, and performance of the V2 temporal document database system 557
Document-driven approach
A document-driven agent-based approach for business processes management 373
Dynamic code generation
Efficient mediators with closures for handling dynamic interfaces in an imperative language 351
Dynamic modeling
Evaluation of the comprehension of the dynamic modeling in UML 35

E-business
Efficient data mining for web navigation patterns 55
E-commerce environments
A secure methodology for interchangeable services 343
Electronic commerce
A distributed and interoperable object-oriented support for safe e-commerce transactions 149
An object-oriented analysis method for customer relationship management information systems 433
Embedded control systems
Safer language subsets: an overview and a case history, MISRA C 465
Empirical analysis
Factors related to the difficulty of learning to program in Java—an empirical study of non-novice programmers 99
Empirical assessment
Experimental comparison of the comprehensibility of a Z specification and its implementation in Java 955
Empirical software engineering
The software evaluation framework 'SEF' extended 1037
Event–condition–action paradigm
Expressing and organising business rules 701
Evidential databases
Data fusion application from evidential databases as a support for decision making 547
Evolutionary correctness assurance
Erratum to "On the interplay between consistency, completeness, and correctness in requirements evolution" 763
Evolutionary design
Adaptive development and maintenance of user-centric software systems 973
Expert estimation
Top-down and bottom-up expert estimation of software development effort 3
Extensions
Adding pattern related information in structural and behavioral diagrams 293
Extreme programming
A structured experiment of test-driven development 337

False positives
Assessing defect detection performance of interacting teams in object-oriented design inspection 875
Fault-based testing
Comparison of fault classes in specification-based testing 525
Fault classes
Comparison of fault classes in specification-based testing 525
Federated databases
A metadata approach to multimedia database federations 195
File sharing
The design of an anonymous file sharing system based on group anonymity 273
Firewall
Independent examination of software: an experiment 847
Formal framework
A formal framework for analyzing reusability complexity in component-based systems 791
Formal methods
An integrated framework for formal development of open distributed systems 281
Formal semantics
A method for the automatic generation of test suites from object models 309
Formal Specification
Experimental comparison of the comprehensibility of a Z specification and its implementation in Java 955
Formal specification language
Automated rapid prototyping of TUG specifications using Prolog 857
Formality
Automated rapid prototyping of TUG specifications using Prolog 857
Framework for architecture structure
An industrial study on building consensus around software architectures and quality attributes 805
Frameworks
On the composition of Java frameworks control-flows 301
A statecharts-based software development process for mobile agents 907
Functional dependency
Automated elicitation of functional dependencies from source codes of database transactions 109
Functional integration model
Reengineering windows software applications into reusable CORBA objects 403

Genetic algorithm
Software release planning: an evolutionary and iterative approach 243

Haskell
Verifying Haskell programs by combining testing, model checking and interactive theorem proving 1011
High dimension
FINDIT: a fast and intelligent subspace clustering algorithm using dimension voting 255
Human factors
Factors related to the difficulty of learning to program in Java—an empirical study of non-novice programmers 99
Communication and co-ordination practices in software engineering projects 473
The software evaluation framework 'SEF' extended 1037

Incremental software development
Software release planning: an evolutionary and iterative approach 243

Indexing technique
An adaptive indexing technique using spatio-temporal query workloads 229
Indirect predicates
Multi-way R-tree joins using indirect predicates 739
Information flow control
Dynamic adaptation to object state change in an information flow control model 729
Information security
Dynamic adaptation to object state change in an information flow control model 729
Information sharing
The design of an anonymous file sharing system based on group anonymity 273
Information system
An object-oriented analysis method for customer relationship management information systems 433
Information systems
Object versioning and information management 491
Information technology investments
The productivity impact of information technology in the healthcare industry: an empirical study using a regression spline-based approach 65
Inspection
Self-assessment of performance in software inspection processes 185
Inspection meeting
Assessing defect detection performance of interacting teams in object-oriented design inspection 875
Integrity constraints
On handling time-varying data in the relational data model 119
Intermediators
Efficient mediators with closures for handling dynamic interfaces in an imperative language 351
Interoperability
A secure methodology for interchangeable services 343
Intrusion detection
Cost effective management frameworks: the impact of IDS deployment technique on threat mitigation 651
Intrusion detection system design
Cost effective management frameworks: the impact of IDS deployment technique on threat mitigation 651
Java
A distributed execution environment for shared java objects 445
Size and effort estimation for applications written in Java 589
A statecharts-based software development process for mobile agents 907
JAVA
A distributed and interoperable object-oriented support for safe e-commerce transactions 149
Java programming
Factors related to the difficultv of learning to program in Java—an empirical study of non-novice programmers 99

Knowledge integration
An empirical study of the effect of knowledge integration on software development performance 899
Knowledge management
An empirical study of the effect of knowledge integration on software development performance 899
Kuhn's hierarchy
Comparison of fault classes in specification-based testing 525

Language extension
M-UML: an extension to UML for the modeling of mobile agent-based software systems 219
Learning effectiveness
Evaluating the learning effectiveness of using simulations in software project management education: results from a twice replicated experiment 127
Legacy code reuse
Migrating legacy codes to distributed computing environments: a CORBA approach 457
Lifecycle modeling
Defect detection oriented lifecycle modeling in complex product development 665
Linear hashing
Scalable distributed compact trie hashing (CTH*) 923
Logistic regression
Prediction of software failures through logistic regression 781

Mediators
Efficient mediators with closures for handling dynamic interfaces in an imperative language 351
Metadata
Implementing a community web site: a scenario-based methodology 17
A metadata approach to multimedia database federations 195
Method
An object-oriented analysis method for customer relationship management information systems 433
Method configuration
Method configuration: adapting to situational characteristics while creating reusable assets 619
Method engineering
Method configuration: adapting to situational characteristics while creating reusable assets 619
Methodological framework
A methodological framework for generic conceptualisation: problem-sensitivity in software engineering 635
Methodology
A formal framework for analyzing reusability complexity in component-based systems 791
A role-driven component-oriented methodology for developing collaborative commerce systems 819
Metrics
A comparison of cohesion metrics for object-oriented systems 677
The software evaluation framework 'SEF' extended 1037
Mirroring
Mirror adaptive random testing 1001
Models
An aspect-based approach to modeling access control concerns 575
Mobile agent
A document-driven agent-based approach for business processes management 373
Mobile agents
M-UML: an extension to UML for the modeling of mobile agent-based software systems 219
A statecharts-based software development process for mobile agents 907
Mobility requirements
M-UML: an extension to UML for the modeling of mobile agent-based software systems 219
Model checking
Independent examination of software: an experiment 847

Model-based test generation
Towards model-based generation of self-priming and self-checking conformance tests for interactive systems 315
Model-driven development
Instrumenting scenarios in a model-driven development environment 1027
Multi-formalism
An integrated framework for formal development of open distributed systems 281
Multimedia
A metadata approach to multimedia database federations 195
Multivariate adaptive regression splines
The productivity impact of information technology in the healthcare industry: an empirical study using a regression spline-based approach 65
M-way R-tree join
Multi-way R-tree joins using indirect predicates 739

Networking
Network application programming interfaces (APIs) performance on commodity operating systems 397
Neural network
Prediction of software development faults in PL/SQL files using neural network models 519
Non-functional requirements
An aspect-oriented framework for developing component-based software with the collaboration-based architectural style 81
Normal form
Normal forms for XML documents 839
Notations
Adding pattern related information in structural and behavioral diagrams 293

Object modelling
A method for the automatic generation of test suites from object models 309
Object oriented
Size and effort estimation for applications written in Java 589
Object orientation
Factors related to the difficulty of learning to program in Java—an empirical study of non-novice programmers 99
Object oriented modelling
Object versioning and information management 491
Object oriented software
On the composition of Java frameworks control-flows 301
Object versioning
Object versioning and information management 491
Object-orientation
Object-oriented conceptual modeling for commitment-based collaboration management in virtual enterprises 209
Object-orientated programming
An integrated framework for formal development of open distributed systems 281
Object-oriented
A comparison of cohesion metrics for object-oriented systems 677
Object-oriented analysis
An object-oriented analysis method for customer relationship management information systems 433
Object-oriented design reuse
Toward reuse of object-oriented software design models 499
Object-oriented software
Measurement of object-oriented software spatial complexity 689
Object-oriented systems
Dynamic adaptation to object state change in an information flow control model 729
Ontological models
A controller synthesis algorithm for building self-adaptive software 719
OO design classification
Toward reuse of object-oriented software design models 499
Open distributed systems
An integrated framework for formal development of open distributed systems 281
Operating system
Network application programming interfaces (APIs) performance on commodity operating systems 397
Operational distribution
How to judge testing progress 323
Optimal testing
Optimal and adaptive testing for software reliability assessment 989
Overwhelming trace problem
Data fusion application from evidential databases as a support for decision making 547
Partial functional dependency
Normal forms for XML documents 839
Participative design
Adaptive development and maintenance of user-centric software systems 973
Participatory design
How use–oriented development can take place 603
Peer to peer
A peer to peer (P2P) architecture for dynamic workflow management 423
Performance
Network application programming interfaces (APIs) performance on commodity operating systems 397
Preference
Efficient data mining for web navigation patterns 55
Preferred navigation patterns
Efficient data mining for web navigation patterns 55
Problem orientation
A methodological framework for generic conceptualisation: problem-sensitivity in software engineering 635
Problem solving environments
Migrating legacy codes to distributed computing environments: a CORBA approach 457
Process
DPEM: a decentralized software process enactment model 383
Process analysis method
Structuring professional cooperation 415
Process improvement
Implementing requirements engineering processes throughout organizations: success factors and challenges 937
Process language
DPEM: a decentralized software process enactment model 383
Process structuring
Structuring professional cooperation 415
Process-centered software engineering environment
DPEM: a decentralized software process enactment model 383
Productivity
The productivity impact of information technology in the healthcare industry: an empirical study using a regression spline-based approach 65

Professional
Structuring professional cooperation 415
Program analysis
Automated elicitation of functional dependencies from source codes of database transactions 109
Program specification
Software engineering aspects of constraint-based timetabling—a case study 359
Program verification
Verifying Haskell programs by combining testing, model checking and interactive theorem proving 1011
Project integration
The impact of cognitive complexity on project leadership performance 165
Project leaders
The impact of cognitive complexity on project leadership performance 165
Project management
The impact of cognitive complexity on project leadership performance 165
Proof-assistants
Verifying Haskell programs by combining testing, model checking and interactive theorem proving 1011
Prototype Verification System
An integrated framework for formal development of open distributed systems 281
Psychological complexity
Measurement of object-oriented software spatial complexity 689

Query processing
The design, implementation, and performance of the V2 temporal document database system 557

Random testing
Mirror adaptive random testing 1001
Verifying Haskell programs by combining testing, model checking and interactive theorem proving 1011
Range-partitioning
Scalable distributed compact trie hashing (CTH*) 923
Rapid prototyping
Automated rapid prototyping of TUG specifications using Prolog 857
Regression splines
The productivity impact of information technology in the healthcare industry: an empirical study using a regression spline-based approach 65
Relational database
The space efficiency of XML 753
Release planning
Software release planning: an evolutionary and iterative approach 243
Reliability
Data fusion application from evidential databases as a support for decision making 547
Replicated experiment
Evaluating the learning effectiveness of using simulations in software project management education: results from a twice replicated experiment 127
Replication
A distributed execution environment for shared java objects 445
Repository
Expressing and organising business rules 701
Requirements and software change
Adaptive development and maintenance of user-centric software systems 973
Requirements engineering
Implementing requirements engineering processes throughout organizations: success factors and challenges 937
Requirements prioritization
Software release planning: an evolutionary and iterative approach 243
Reusable design models classification
Toward reuse of object-oriented software design models 499
Reuse
Method configuration: adapting to situational characteristics while creating reusable assets 619
Risk assessment
Cost effective management frameworks: the impact of IDS deployment technique on threat mitigation 651
Role
A role-driven component-oriented methodology for developing collaborative commerce systems 819
Role-based access control
An aspect-based approach to modeling access control concerns 575
Dynamic adaptation to object state change in an information flow control model 729
R-trees
An adaptive indexing technique using spatio-temporal query workloads 229
Rule categories
Safer language subsets: an overview and a case history, MISRA C 465
Rule management
Expressing and organising business rules 701
Rule signal to noise
Safer language subsets: an overview and a case history, MISRA C 465
Run-time specialization
Efficient mediators with closures for handling dynamic interfaces in an imperative language 351

Safer language subsets
Safer language subsets: an overview and a case history, MISRA C 465
Scalable distributed data structures
Scalable distributed compact trie hashing (CTH*) 923
Scenario-based methodology
Implementing a community web site: a scenario-based methodology 17
Scenarios
Instrumenting scenarios in a model-driven development environment 1027
Search
A distributed and interoperable object-oriented support for safe e-commerce transactions 149
Secure electronic transaction
A secure methodology for interchangeable services 343
Self-adaptive software
A controller synthesis algorithm for building self-adaptive software 719
Semantic comprehension
Evaluation of the comprehension of the dynamic modeling in UML 35
Simple object access protocol
A peer to peer (P2P) architecture for dynamic workflow management 423

Situational method
Method configuration: adapting to situational characteristics while creating reusable assets 619
Socket
Network application programming interfaces (APIs) performance on commodity operating systems 397
Software architecture
An aspect-oriented framework for developing component-based software with the collaboration-based architectural style 81
Adaptive development and maintenance of user-centric software systems 973
Software components
Migrating legacy codes to distributed computing environments: a CORBA approach 457
Software cybernetics
Optimal and adaptive testing for software reliability assessment 989
Software development method
Structuring professional cooperation 415
Software development performance
An empirical study of the effect of knowledge integration on software development performance 899
Software engineering decision support
Software release planning: an evolutionary and iterative approach 243
Software engineering
A structured experiment of test-driven development 337
Software engineering aspects of constraint-based timetabling—a case study 359
Communication and co-ordination practices in software engineering projects 473
A methodological framework for generic conceptualisation: problem-sensitivity in software engineering 635
Software evaluation
The software evaluation framework 'SEF' extended 1037
Software fault models
Towards model-based generation of self-priming and self-checking conformance tests for interactive systems 315
Software inspection
Assessing defect detection performance of interacting teams in object-oriented design inspection 875
Software integration
Reengineering windows software applications into reusable CORBA objects 403
Software licensing models
A secure methodology for interchangeable services 343
Software metrics
Prediction of software development faults in PL/SQL files using neural network models 519
Measurement of object-oriented software spatial complexity 689
Software prediction
Prediction of software development faults in PL/SQL files using neural network models 519
Software process
Communication and co-ordination practices in software engineering projects 473
Software process models
How use–oriented development can take place 603
Software product line
Component documentation—a key issue in software product lines 535
Software project management
Communication and co-ordination practices in software engineering projects 473
Software project management education
Evaluating the learning effectiveness of using simulations in software project management education: results from a twice replicated experiment 127
Software quality
An empirical study of the effect of knowledge integration on software development performance 899
The software evaluation framework 'SEF' extended 1037
Software reliability assessment
Optimal and adaptive testing for software reliability assessment 989
Software requirements
Erratum to "On the interplay between consistency, completeness, and correctness in requirements evolution" 763
Software reuse
On the composition of Java frameworks control-flows 301
Reengineering windows software applications into reusable CORBA objects 403
Software size estimation
Size and effort estimation for applications written in Java 589
Software test oracles
Towards model-based generation of self-priming and self-checking conformance tests for interactive systems 315
Software testing
How to judge testing progress 323
On the testing methods used by beginning software testers 329
Prediction of software failures through logistic regression 781
Mirror adaptive random testing 1001
Software transformation
Automated rapid prototyping of TUG specifications using Prolog 857
Software verification
Automated elicitation of functional dependencies from source codes of database transactions 109
Space efficiency
The space efficiency of XML 753
Spatial complexity
Measurement of object-oriented software spatial complexity 689
Spatial databases
Multi-way R-tree joins using indirect predicates 739
Spatial join
Multi-way R-tree joins using indirect predicates 739
Spatio-temporal databases
An adaptive indexing technique using spatio-temporal query workloads 229
Specification-based testing
On the testing methods used by beginning software testers 329
Comparison of fault classes in specification-based testing 525
On the identification of categories and choices for specification-based test case generation 887
Split-plot factorial design
Evaluation of the comprehension of the dynamic modeling in UML 35
Statecharts
A statecharts-based software development process for mobile agents 907
Structured Query Language metrics
Prediction of software development faults in PL/SQL files using neural network models 519
Subjective estimation
Self-assessment of performance in software inspection processes 185

Subspace clustering
FINDIT: a fast and intelligent subspace clustering algorithm using dimension voting 255
Supervisory control
A controller synthesis algorithm for building self-adaptive software 719
System dynamics simulation
Evaluating the learning effectiveness of using simulations in software project management education: results from a twice replicated experiment 127

Temporal databases
The design, implementation, and performance of the V2 temporal document database system 557
Temporal query languages
On handling time-varying data in the relational data model 119
Temporal relations
On handling time-varying data in the relational data model 119
Test case selection
Mirror adaptive random testing 1001
Test data adequacy
How to judge testing progress 323
Test driven development
A structured experiment of test-driven development 337
Test frame
On the identification of categories and choices for specification-based test case generation 887
Test progress
How to judge testing progress 323
Testing
A method for the automatic generation of test suites from object models 309
Third-party component
Component documentation—a key issue in software product lines 535
Time in databases
On handling time-varying data in the relational data model 119
Timestamp and interval queries
An adaptive indexing technique using spatio-temporal query workloads 229
Timetabling
Software engineering aspects of constraint-based timetabling—a case study 359
Top-down estimation
Top-down and bottom-up expert estimation of software development effort 3
Transitive functional dependency
Normal forms for XML documents 839
Trust
A distributed and interoperable object-oriented support for safe e-commerce transactions 149
TUG
Automated rapid prototyping of TUG specifications using Prolog 857
Type theory
Verifying Haskell programs by combining testing, model checking and interactive theorem proving 1011

Understandability
Measurement of object-oriented software spatial complexity 689
Unified modeling language
Adding pattern related information in structural and behavioral diagrams 293
Unified modeling language (UML)
A method for the automatic generation of test suites from object models 309
Unified Modeling Language
Evaluation of the comprehension of the dynamic modeling in UML 35
M-UML: an extension to UML for the modeling of mobile agent-based software systems 219
An integrated framework for formal development of open distributed systems 281
Usability
How use–oriented development can take place 603
Use-cases
Instrumenting scenarios in a model-driven development environment 1027
User authentication
Efficient mediators with closures for handling dynamic interfaces in an imperative language 351
User group
The design of an anonymous file sharing system based on group anonymity 273
User participation
How use–oriented development can take place 603

Validation
Instrumenting scenarios in a model-driven development environment 1027
Verification
Instrumenting scenarios in a model-driven development environment 1027
Verification and validation
Independent examination of software: an experiment 847
Virtual enterprise
Object-oriented conceptual modeling for commitment-based collaboration management in virtual enterprises 209
Virtual visit
Virtual visits to cultural heritage supported by web-agents 173
V-model
Defect detection oriented lifecycle modeling in complex product development 665

Web application
Virtual visits to cultural heritage supported by web-agents 173
Web archiving
The design, implementation, and performance of the V2 temporal document database system 557
Web log
Efficient data mining for web navigation patterns 55
Web services
A peer to peer (P2P) architecture for dynamic workflow management 423
Web site development
Implementing a community web site: a scenario-based methodology 17
Web usage mining
Efficient data mining for web navigation patterns 55
White box testing
On the testing methods used by beginning software testers 329
Workflow management
A peer to peer (P2P) architecture for dynamic workflow management 423
Wrapper generator
Migrating legacy codes to distributed computing environments: a CORBA approach 457

XML
A peer to peer (P2P) architecture for dynamic workflow management 423
The space efficiency of XML 753
Normal forms for XML documents 839

Article index – Volume 46

Number 1

Publisher's note
Free color illustrations in the online version of articles
D. Georgescu 1
Top-down and bottom-up expert estimation of software development effort
M. Jørgensen 3
Implementing a community web site: a scenario-based methodology
C. Lee, W. Suh and H. Lee 17
Evaluation of the comprehension of the dynamic modeling in UML
M. C. Otero and J. J. Dolado 35
Efficient data mining for web navigation patterns
D. Xing and J. Shen 55
The productivity impact of information technology in the healthcare industry: an empirical study using a regression spline-based approach
M. Ko and K.-M. Osei-Bryson 65
Erratum to "On the interplay between consistency, comleteness, and correctness in requirements evolution" [Information and Software Technology 45 (2003) 993–1009]
D. Zowgli and V. Gervasi 75

Number 2

An aspect-oriented framework for developing component-based software with the collaboration-based architectural style
J.-S. Lee and D.-H. Bae 81
Factors related to the difficulty of learning to program in Java—an empirical study of non-novice programmers
A. Benander, B. Benander and J. Sang 99
Automated elicitation of functional dependencies from source codes of database transactions
H. B. K. Tan and Y. Zhao 109
On handling time-varying data in the relational data model
A. U. Tansel 119
Evaluating the learning effectiveness of using simulations in software project management education: results from a twice replicated experiment
D. Pfahl, O. Laitenberger, G. Ruhe, J. Dorsch and T. Krivobokova 127

Number 3

A distributed and interoperable object-oriented support for safe e-commerce transactions
Y. Atif 149
The impact of cognitive complexity on project leadership performance
G. C. Green 165
Virtual visits to cultural heritage supported by web-agents
M. E. Bonfigli, G. Cabri, L. Leonardi and F. Zambonelli 173
Self-assessment of performance in software inspection processes
Z. Yin, A. Dunsmore and J. Miller 185
A metadata approach to multimedia database federations
D. Bećarević and M. Roantree 195

Number 4

Object-oriented conceptual modeling for commitment-based collaboration management in virtual enterprises
J. Lin and T.-e. Lin 209
M-UML: an extension to UML for the modeling of mobile agent-based software systems
K. Saleh and C. El-Morr 219
An adaptive indexing technique using spatio-temporal query workloads
H.-J. Cho, J.-K. Min and C.-W. Chung 229
Software release planning: an evolutionary and iterative approach
D. Greer and G. Ruhe 243
FINDIT: a fast and intelligent subspace clustering algorithm using dimension voting
K.-G. Woo, J.-H. Lee, M.-H. Kim and Y.-J. Lee 255
The design of an anonymous file sharing system based on group anonymity
S. Krishnan and J. Uhlmann 273

Number 5

Editorial
Special Issue on Software Engineering: Applications, Practices and Tools from the ACM Symposium on Applied Computing 2003
H. H. Thompson, C.-C. Chiang, I. K. El-Far, S. Gruner, M. Montigel and J. A. Whittaker 279
An integrated framework for formal development of open distributed systems
I. Traoré, D. Aredo and H. Ye 281
On formalizing UML state machines using ASMs
E. Börger, A. Cavarra and E. Riccobene 287
Adding pattern related information in structural and behavioral diagrams
J. Dong 293
On the composition of Java frameworks control-flows
A. C. V. de Melo and B. M. Moutinho 301
A method for the automatic generation of test suites from object models
A. Cavarra, C. Crichton and J. Davies 309
Towards model-based generation of self-priming and self-checking conformance tests for interactive systems
A. Paradkar 315
How to judge testing progress
E. J. Weyuker 323
On the testing methods used by beginning software testers
Y. T. Yu, S. P. Ng, P.-L. Poon and T. Y. Chen 329
A structured experiment of test-driven development
B. George and L. Williams 337
A secure methodology for interchangeable services

PII: S0950-5849(04)00158-2

B. Fenicle and T. Wahls 343
Efficient mediators with closures for handling dynamic interfaces in an imperative language
Y. Shinjo, T. Kubo and C. Pu 351

Number 6

Software engineering aspects of constraint-based timetabling—a case study
A. Abbas and E. P. K. Tsang 359
A document-driven agent-based approach for business processes management
J.-Y. Kuo 373
DPEM: a decentralized software process enactment model
S.-C. Chou 383
Network application programming interfaces (APIs) performance on commodity operating systems
S. Zeadally, L. Zhang, Z. Zhu and J. Lu 397
Reengineering windows software applications into reusable CORBA objects
J.-M. Lin, Z.-W. Hong, G.-M. Fang, H. C. Jiau and W. C. Chu 403
Structuring professional cooperation
H. R. Walters 415
A peer to peer (P2P) architecture for dynamic workflow management
G. J. Fakas and B. Karakostas 423

Number 7

An object-oriented analysis method for customer relationship management information systems
J. Lin and M.-C. Lee 433
A distributed execution environment for shared java objects
N. Erdogan, Y. E. Selcuk and O. Sahingoz 445
Migrating legacy codes to distributed computing environments: a CORBA approach
M. Li, D. W. Walker, O. F. Rana and Y. Huang 457
Safer language subsets: an overview and a case history, MISRA C
L. Hatton 465
Communication and co-ordination practices in software engineering projects
I. R. McChesney and S. Gallagher 473
Object versioning and information management
S. Khaddaj, A. Adamu and M. Morad 491

Number 8

Toward reuse of object-oriented software design models
F. M. Ali and W. Du 499
Prediction of software development faults in PL/SQL files using neural network models
T.-S. Quah and M. M. T. Thwin 519
Comparison of fault classes in specification-based testing
V. Okun, P. E. Black and Y. Yesha 525
Component documentation—a key issue in software product lines
A. Taulavuori, E. Niemelä and P. Kallio 535
Data fusion application from evidential databases as a support for decision making
A. Telmoudi and S. Chakhar 547

Number 9

The design, implementation, and performance of the V2 temporal document database system
K. Nørvåg 557
An aspect-based approach to modeling access control concerns
I. Ray, R. France, N. Li and G. Georg 575
Size and effort estimation for applications written in Java
J. Kaczmarek and M. Kucharski 589
How use–oriented development can take place
Y. Dittrich and O. Lindeberg 603
Method configuration: adapting to situational characteristics while creating reusable assets
F. Karlsson and P. J. Ågerfalk 619

Number 10

A methodological framework for generic conceptualisation: problem-sensitivity in software engineering
J. Andrade, J. Ares, R. García, J. Pazos, S. Rodríguez and A. Silva 635
Cost effective management frameworks: the impact of IDS deployment technique on threat mitigation
C. Iheagwara, A. Blyth, T. Kevin and D. Kinn 651
Defect detection oriented lifecycle modeling in complex product development
J. van Moll, J. Jacobs, R. Kusters and J. Trienekens 665
A comparison of cohesion metrics for object-oriented systems
L. H. Etzkorn, S. E. Gholston, J. L. Fortune, C. E. Stein, D. Utley, P. A. Farrington and G. W. Cox 677
Measurement of object-oriented software spatial complexity
J. K. Chhabra, K. K. Aggarwal and Y. Singh 689

Number 11

Expressing and organising business rules
P. Kardasis and P. Loucopoulos 701
A controller synthesis algorithm for building self-adaptive software
G. Tziallas and B. Theodoulidis 719
